

Individual Reflection

Isak Lindgren

24/4 - 20

What do I want to learn or understand better?

... the current situation or "what is" (A),

It has been some time since the last reflection and a lot has happened since. We have begun actually working on the project, programming using React primarily. At this moment I feel like I'm getting the hang of how javascript and React works which is nice. I am still confused as of how exactly we are going to/are using Scrum and what we need to do to use it in a correct way. Somehow I feel like we are missing some important aspects of this.

... what you want the situation to be or "what might or should be" (B)

I would of course like to get better at React, knowing more of how to structure a web-design project, etc, but what I primarily want to do is to get a better understanding of what is needed to use Scrum correctly.

... a plan for getting from where you are to where you want to be or "feedback designed to reduce the gap" (A -> B).

To get better at React and programming I believe I simply need to put in the time to program, I feel like the tutorial I did in React was efficient and I have already gone back to it a few times to refresh my memory on some things, so I think I will just keep doing that and keep using the official documentation for React.

To get a better understanding of Scrum I will try to read up on the resources available on the course site and also use our supervision time to ask about things like DoD, Acceptance Criteria and KPI;s and what is expected of us.

How can I help someone else, or the entire team, to learn something new?

... the current situation or "what is" (A),

This week we have all begun working on the project with all that it entails, dealing with version control, IDE:s, dependencies,libraries etc. This is something I have spent some time on helping some of my teammates with. I have also tried to be as active as possible in handling pull requests as we decided to use this as a form of quality control.

... what you want the situation to be or "what might or should be" (B)

At the moment I'm not sure if there is anything specific I can help with or learn anyone, so I will simply try to make myself available to everyone and help if I can.

... a plan for getting from where you are to where you want to be or "feedback designed to reduce the gap" (A -> B).

What is my contribution towards the team's use of Scrum?

... the current situation or "what is" (A),

We are closing in on being finished with the first sprint. So far I think it has worked out quite nicely. I have this week contributed to my team's use of Scrum by taking part in the meeting which started this weeks sprint and also the end of sprint meeting. I have also taken completed a few tasks and reviewed some of my teammates contributions via pull requests.

What is my contribution towards the team's deliveries?

... the current situation or "what is" (A),

As said above, I have completed a few tasks and have tried to be available for my teammates in case they have had any questions/needed help with anything, I have also written parts of the group reflection.
